

# Datasheet Company Overview

## The AI Platform That Delightfully Unifies Procurement

Levelpath is an AI-native platform that reimagines procurement across intake, sourcing, contracts, and project pipeline. Built for the modern enterprise, Levelpath simplifies complexity, connects teams, and supports data-driven decision-making through a mobile-friendly, intuitive experience that aligns with what your organization needs.

At the core of Levelpath is Hyperbridge, our proprietary reasoning engine that connects enterprise data to deliver AI-powered insights across workflows. Combined with platform-wide permission controls and a robust library of native integrations and APIs, Levelpath creates a seamless, scalable environment.

## Front Door to Procure

The procurement journey starts with Levelpath's natural language AI Front Door. Each intake request is intelligently routed to the appropriate destination, whether that is a catalog, company policy, procurement, or third-party tool. Stakeholders benefit from an easy-to-use experience that eliminates guesswork and teams gain real-time visibility into requests. With native mobile access, users can track progress, approve actions, and collaborate anytime, anywhere.

## Smarter, Faster Sourcing

Levelpath empowers sourcing teams to launch events, analyze supplier responses, and award bids without tedious, manual work. Levelpath's AI Agents replace fragmented tools with a data-driven experience that extracts, analyzes, and compares supplier responses. Built-in collaboration tools help stakeholders and suppliers stay aligned so sourcing becomes faster, more transparent, and fully connected across systems and teams.

## Strategic Contract Management

Contracts become actionable assets when managed through Levelpath. The platform combines a centralized repository with built-in intelligence, using AI Agents and OCR to generate summaries, surface risks, and identify milestones. Automated workflows streamline approvals and renewals, while real-time visibility into contract status and obligations helps mitigate risk. The result is strategic contract lifecycle management that integrates easily into existing operations.

## Project Planning Pipeline

Levelpath provides full visibility into project status, workload distribution, and savings opportunities. AI insights help teams track progress against goals, forecast total savings, and identify potential opportunities. By surfacing trends and performance indicators, and aligning the right stakeholders at the right time, Levelpath empowers procurement teams to move with greater confidence, speed, and focus.

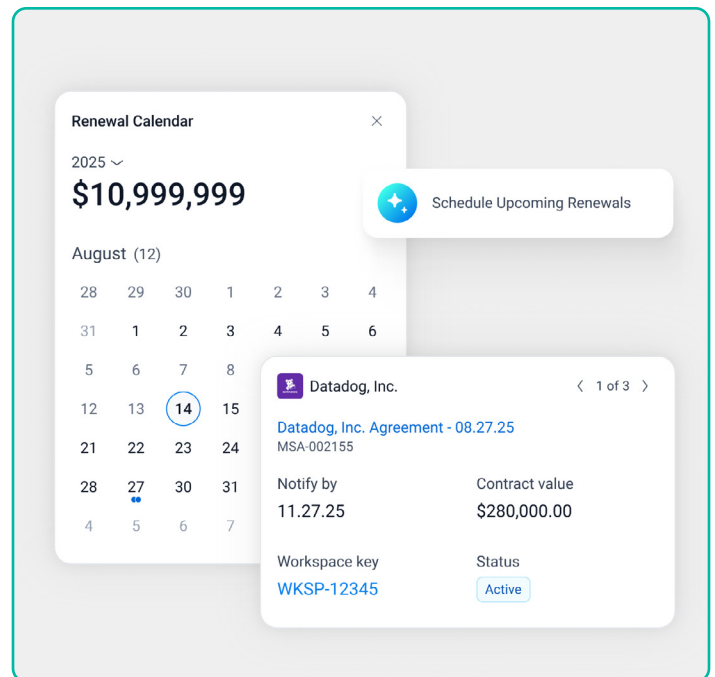

## Supplier Risk Management

Levelpath gives organizations clear visibility and control over supplier risk through AI-native tools that help teams document, assess, and monitor suppliers. With AI enrichment, continuous monitoring, and standardized workflows, teams gain a unified view of financial, compliance, and operational factors while simplifying audits. By turning risk data into insights, Levelpath helps teams protect continuity, strengthen partnerships, and proactively manage exposure.

“

Levelpath has transformed SiriusXM's procurement process from a scattered, manual effort to a streamlined, centralized system. It's not just a tool; it's a delightful catalyst for organizational change.
